Fourth Quarter Earnings Per Common Share was \$12.08

"It was a challenging year on many fronts, and I am deeply proud of how our people helped clients respond to the economic disruption brought on by the pandemic and the extreme market volatility experienced over the past months. Our people responded admirably to a series of professional and personal challenges, while working from home or in offices that were reshaped dramatically. Thanks to their perseverance, we were able to help clients navigate a difficult environment, and, as a result, achieved strong results across the franchise, while advancing our strategic priorities. We hope this year brings much needed stability and a respite from the pandemic, but we remain ready to handle a wide range of outcomes and are poised to meet the needs of our clients."

#### **Footnotes**

1. ROE is calculated by dividing net earnings (or annualized net earnings for annualized ROE) applicable to common shareholders by average monthly common shareholders' equity. ROTE is calculated by dividing net earnings (or annualized net earnings for annualized ROTE) applicable to common shareholders by average monthly tangible common shareholders' equity (tangible common shareholders' equity is calculated as total shareholders' equity less preferred stock, goodwill and identifiable intangible assets). Management believes that ROTE is meaningful because it measures the performance of businesses consistently, whether they were acquired or developed internally, and that tangible common shareholders' equity is meaningful because it is a measure that the firm and investors use to assess capital adequacy. ROTE and tangible common shareholders' equity are non-GAAP measures and may not be comparable to similar non-GAAP measures used by other companies.

The table below presents a reconciliation of average common shareholders' equity to average tangible common shareholders' equity:
